## PROJECTS

### Dual Axis Solar Tracking with Power Saving System (Academic Project):

- The core feature of this project is its power-saving capability and it uses LDR's to detect the sun's position and an embedded microcontroller to control two servo motors.
- This Project concluded that it tracks the maximum sun rays using LDR sensors, it gives 40% more electricity than a non-moving solar panel.
- Tools used: Solar panel, Sensors, PCB, Gear motor, LCD.

### Personal Portfolio Website:

A self-designed personal portfolio website that showcases my web development projects, skills, and professional experience

- Used **HTML5** and **CSS3** to structure and style the site, ensuring a clean, organized layout.
- Utilized **React** to build reusable components, improving the scalability and maintainability of the website.
- Deployed the site on **GitHub Pages** for easy access, allowing for continuous updates and showcasing my latest work.

**Technologies used:** HTML, CSS, JavaScript, React, Redux.
